VISION·2

Dedicated to the Highest Security Measures

Vision2 goes above and beyond typical security measures for your parish and your parishioners.

PCI-Certified: Vision2 is PCI DSS Level 1-certified and undergoes independent annual audits to maintain certification.

Donation Controls / Anonymous Cash: Gifts can't be changed; a void is always required. Audit trails are created for vulnerable contributions not handled by our payment processing.

Credit Card Scanning Authorization Charges: Intelligent checks manage the risks without slowing down the giving transaction like captcha and other approaches. Shuts down inappropriate authorization activities after 5-6 attempts and multiple cards coming from the same IP address.

Enhanced Encryption: To reduce attacks on the data we safeguard, Vision2 goes beyond database encryption, uniquely encrypting each bank account and individual credit card before your giver has even input their expiration date and CVV number.

Protected Transaction History: Ensures a record of all captured and recorded transactions and prevents the deletion of contribution data.

Fraud Prevention: Automated individual reconciliation process prevents the generation of statements for NSF checks or ACHs, reducing IRS risk.

Access Control Via User Roles: A variety of specific roles manage and control access to data and changes. (e.g. Data entry and communications roles cannot access giving records.)

Protected Payment Method Details: No Vision2 personnel can access payment method information in any readable, usable format.

Two-Factor Authentication: Admin portal can be protected by enabling two-factor authentication.

IN OUR 10 YEARS OF BUSINESS, WE'VE TRANSACTED OVER $2 BILLION IN GIFTS WITH NO DATA COMPROMISED.
